BUYBACK MECHANISM

07

Meme tokens are often much more volatile and can drop or climb very quickly. this is why we have integrated a buyback mechanism that will allow the price to be maintained.

it is often due to the lack of fundamental that we use the same tokens and we are aware of it. Although **Lucky Baby Doge** will have specific features, we wanted to add this buyback mechanism

How it works ?

During each transaction a part of the BNB is sent to the contract.

When the contract reaches a certain cap (by default 1 BNB), a part of it is used to buy back the \$ Lucky Baby Doge tokens.

Once these are redeemed, they are automatically sent to the burn address. It's important to note that everything is done automatically and therefore the process cannot be altered and the funds cannot be diverted.

On each transactions, 10% of immutable tax are applied. The 2% of this tax is going to a marketing wallet who will be used for marketing purpose only.
